The Hong Kong Special Administrative Region’s Feedback on IRGN2338

IRGN2338 proposed to disunify U+2F878 from U+5C6E. This document provides feedback as follows.

1. U+2F878 is included in the Hong Kong Supplementary Character Set – 2016 (see Picture 1). The glyph and the source reference (H-8BC3) are found in the H-column of U+2F878 in ISO/IEC 10646:2017 (see Picture 2). U+2F878 is unified to U+5C6E.

Picture 2:

2. The glyphs of U+5C6E are shown in ISO/IEC 10646:2017 (see Picture 3).

Picture 3:

3. In the Hong Kong Special Administrative Region (HKSAR), “𠂇” (U+2F878) is a variant of “𠂇” (U+5C6E) and is seldom used to mean “左” (the left side). The existing code point (2F878) for H-8BC3 should be maintained. As such, the HKSAR will not request the disunification of U+2F878 from U+5C6E.
