𠄎𠄎万 is not Japanese simplification of 厲. Even it is, different branch of simplification should not be unified. For example, U+2C0B2 𠄎 should not unified to U+6860 𠄎. Also, it's too odd to write 𠄎 as 𠄎 in PRC, so 01679(UTC-01746) should not be unified to U+6803 𠄎.

Unifying 𠄎 and 𠄎 is OK, but unifying 𠄎 and 𠄎 is not acceptable. Their difference is significant, and many pairs of ideographs that have the component are not cognate. For example:

賢懿之所挺生。襄休亦曰。知佛爲大聖人。其
教有不可思議之事。是二者始知佛之所以
爲聖人也。故其爲法爲言。乃能感天地而懷
鬼神幽冥。要其法欽其言。而古人嘗發於巫

(U+23CE6,name of river, from 《中华字海》 page 539, number 33).

Consider significant difference and may be non-cognate pairs as component,01679(UTC-01746)
should not be unified to 02462(T13-2E21).
