Action Required: Consideration by IRG

Pages: 1

### Issue

According to IRGN2088 Extension F.2 V 4, the following attributes are recorded:

猯 04514	94.0				猯 KA-KC06493	font not changed, evidence accepted, irg43.
	犬					
	9	3				

The same attributes are also recorded for Extension F.2 V3.

The glyph has not changed since IRGN2018 Extension F.2 V1:

猯 04514	94.0				猯 KA-KC06493	
	犬					
	9	3				

Therefore, I believe the glyph in the code chart for U+2DE17 is in error, and hence not duplicate of U+247EC:

2DE17 犬 94.9 KC-06493	猯	247EC 犬 94.9	猯	猯	猯
		UCS2003	GKX-0716.02	T6-4B3E	

### Suggested Action Item

- Correct the glyph in U+2DE17 to follow the shape as approved by IRG according to the evidence provided in IRG #43.

### Addendum

This difference in shape should be considered a normalization difference by IRG, and hence unified in the future (WS2017 and above).
