1. Vietnam disagrees with the comments on the following 3 characters:

餃	U+296D6	The radical is a variant of 食 that we consider unifiable.
乳	U+200F1	乙 is a variation of the stroke 丿 that we consider unifiable.
踣	U+2801B	The intended glyph is 𠂔 𠂔存, with 子 not 予

2. Shapes of Radicals 74 and 130

Vietnamese usage does not normally distinguish between the shapes of radicals 74 and 130. Some of the shapes in the Nom Na Tong font were borrowed based on Traditional Chinese usage and we have changed them to reflect Vietnamese usage.

臃	U+267E8
柄	U+2336A
