

Feedback on IRGN2225 “CJK Supplementary Components for IDS Use”

Andrew West

2017-10-02

1. IRGN2225 states that the IDS code is preceded by &; (e.g. "&;H7-01"). I think this is a mistake, and the document should state that the ampersand should precede the IDS code, and the semicolon should terminate the IDS code (e.g. "&H7-01;").
2. Remove H3-02 攴 as it is the same as U+2D80D 攴.
3. Consider removing S7-01 苜 as it only occurs in one character (繭), which can be represented as 𠂇𠂈𠂉𠂊𠂋𠂌 𠂍 | 虫.
4. Add separate components for two forms of S7-02.
5. Add another component for PRC form of left side of U+537D 卽 (i.e. 卩) as well as P7-01.
6. Add separate components for two forms of P7-02.
7. Add separate components for three forms of P15-01.
8. Add top of 祭/登 as a separate component instead of representing it as a combination of P4-02/P4-03 and Z2-05.
9. Remove Z4-02 月 as it is the same as U+2D0C2 月.
10. Consider adding the following additional components which are used in the BabelStone public IDS file (<http://www.babelstone.co.uk/CJK/IDS.TXT>):
 - top of 專惠 (𠂇) – distinguish from U+ 53C0 𠂇.
 - right of 托 (𠂇) – distinguish from U+4E47 𠂇.
 - right of 竹傲 (𠂇) – distinguish from U+4E87 𠂇.
 - left of 𠂇, right of 𠂇 (𠂇)
 - top of 𠂇 (𠂇)
 - right of 浦 (𠂇)
 - right of 𠂇 (𠂇) – distinguish from U+3B30 𠂇.

- top of 藁 (声)
- bottom of 玄 (幺)
- outside of 武貳 (弋)
- outside of 幾畿 (幾)
- inside of 鹵 (久)
- right of 帛 (仄)
- left of 鞠 (拳)
- right of 洗 (洗)
- bottom of 窰 (正)
- right of 駟 (亞)
