

Universal Multiple-Octet Coded Character Set
International Organization for Standardization

ISO/IEC JTC1/SC2/WG2 N2270

Title: Vietnam Activity Report for IRG # 52

Source: VNPF

Status: National body contribution

Action: For consideration by JTC1/SC2/WG2/IRG

Date: 12 May 2019

Vietnams' activities have been focused on two area:

1. Responded to comments in online review tool

In particular:

00237 - should be kept separate, provided additional evidence

01080 - can be withdrawn since we cannot find clear evidence, though from the context, the character is a variant of 𡗗.

01024 - can find no additional evidence to support this as a stand-alone character

2. Reviewed IRGN2370

Eiso Chan provided a detailed list of issues regarding glyphs shape and radical-stroke data. Vietnam reviewed and responded. We agreed to all but one the proposed changes, regarding U+8956 and U+2C862:

Both U+2C862 and 𡗗 U+8956 are found in Vietnamese texts. e.g see The Taile of Kieu1866, lines 48 and 696 <<http://localhost/nom-project/tale-of-kieu/tale-of-kieu-version-1866>>. Given that the forms are already encoded and used in Vietnamese data, it's best to make no changes at this point.

We are separately preparing a request for additional horizontal extensions based on IRGN2370 and other information.
